

Instructions to the Authors

[Editorial Process](#) | [Types of Manuscript](#) | [Authorship Criteria](#) | [Sending Manuscript](#) | [Protection of Patients...](#) | [Electronic Version](#) | [Proofs & Download Instructions](#)

Manuscripts must be prepared in accordance with "Uniform requirements for Manuscripts submitted to Biom International Committee of Medical Journal Editors (October 2001). The uniform requirements and specific requirements for Pediatric Neurosciences are summarised below. Articles can be submitted online from <http://www.journalonlin>

The Editorial Process

The manuscripts will be reviewed for possible publication with the understanding that they are being submitted and have not been published, simultaneously submitted, or already accepted for publication elsewhere. The Editor will review manuscripts initially. Manuscripts with insufficient originality, serious scientific flaws, or absence of importance for the journal will not return the unaccepted manuscripts. Other manuscripts are sent to two or more expert reviewers. The Editor will inform the contributors to the reviewers. Within a period of eight to ten weeks, the contributors will be informed of the decision and acceptance/rejection of manuscript. Articles accepted would be copy edited for grammar, punctuation, p

Types of Manuscripts and word limits

Original articles: Randomised controlled trials, intervention studies, studies of screening and diagnostic tests, effectiveness analyses, case-control series, and surveys with high response rate. Up to 2500 words excluding references.
Review articles: Systemic critical assessments of literature and data sources. Up to 3000 words excluding references.

Case reports: new/interesting/very rare cases can be reported. Cases with clinical significance or implications. Mere reporting of a rare case may not be considered. Up to 1000 words excluding references and abstract.

Short reports: new/interesting/very rare cases with clinical significance. Up to 600 words excluding references.

Letter to the Editor: Should be short, decisive observation. They should not be preliminary observations that require validation. Up to 400 words and 4 references.

Neuro Image: Classical clinical/radiological/pathological image Up to 250 words and 4 references.
Announcements of conferences, meetings, courses, awards, and other items likely to be of interest to the readers. Up to 100 words. Include the name and address of the person from whom additional information can be obtained.

Limits for number of images and tables: for all the above-mentioned categories the number of images and tables is limited to one per 500 words.

Authorship criteria

Authorship credit should be based only on substantial contributions: 1) to conception and design or acquisition of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the article for publication. Conditions 1, 2, and 3 must all be met. Participation solely in the acquisition of funding or the collection of data does not constitute authorship. General supervision of the research group is not sufficient for authorship. Each contributor should be prepared to take public responsibility for appropriate portions of the content.

The order of naming the contributors should be based on the relative contribution of the contributor towards the work.

manuscript. Once submitted the order cannot be changed without written consent of all the contributors.

For a study carried out in a single institute the number of contributors should not exceed six. For a case-report the number of contributors should not exceed four. For images and Letter to the Editor the number of contributors should not exceed two. A justification should be included, if the number of contributors exceed these limits.

Sending the Manuscript to the Journal

Send three copies of the manuscript along with a covering letter, contributors' form signed by all the contributors and the photographs in a separate envelope. The covering letter must include information on prior or duplicate publication elsewhere of any part of the work/study; and a statement of financial or other relationships that might lead to conflict of interest. Copies of any permission(s) to reproduce published material, and to use illustrations or report information that will accompany the manuscript. The manuscript should be sent to the

Dr. V. P. Singh

Editor,

C5/12, First Floor,

Safdarjung Development Area,

New Delhi-110016, India.

E-mail: vpsingh1958 @ yahoo . com , editor @ pediatricneurosciences . com

Online submission of articles

Articles can also be submitted online from <http://www.journalonweb.com>. New authors will have to register a step procedure. For online submission articles should be prepared in two files (first page file and article file) separately.

First Page File: Prepare the title page, covering letter, acknowledgement, etc. using a word processor program. Your identity should be here. Use text/rtf/doc/pdf files. Do not zip the files.

Article file: The main text of the article, beginning from Abstract till References (including tables) should be in this file. Use text/rtf/doc/pdf file format. File size to 400 kb. Do not incorporate images in the file. If file size is large, graphs can be submitted as image files incorporating them in the article file to reduce the size of the file.

Images: Submit good quality color images. Each image should be less than 400 kb in size. Size of the image should be the actual height and width of the images (keep up to 1024x760 pixels or 5 inches). All image formats (jpeg, eps, etc.) are acceptable; jpeg is most suitable. Do not zip the files.

Legends: Legends for the figures/images should be kept ready for copy-paste during the submission process.

If the manuscript is submitted online, the contributors' form and copyright transfer form has to be submitted by all the contributors within two weeks from submission. Hard copies of the images (one set), for articles submitted to the journal office at the time of submission of a revised manuscript.

Preparation of the Manuscript

Send laser printout, on white thick paper, of A4 size (210 x 297 mm), with margins of 25 mm (1 inch) from all sides on only one side of the paper. Use double spacing throughout. Number pages consecutively, beginning with the first page. Use American English.

Title Page

The title page should carry

1. Type of manuscript (Original/Review/Case)
2. The title of the article, which should be concise, but informative;
3. Running title or short title not more than 50 characters;
4. The name by which each contributor is known (Last name, First name and initials of middle name), with degree(s) and institutional affiliation;
5. The name of the department(s) and institution(s) to which the work should be attributed;
6. The name, address, phone numbers, facsimile numbers and e-mail address of the contributor responsible for the manuscript;
7. The total number of pages, total number of photographs and word counts separately for abstract and full text, and for references and abstract).
8. Source(s) of support in the form of grants, equipment, etc.; and
9. If the manuscript was presented as part at a meeting, the organisation, place, and exact date on which

Abstract Page

The second page should carry the full title of the manuscript and an abstract (of no more than 150 words for original articles). The abstract should be structured and state the Context (Background), Aims and Objectives, Statistical analysis used, Results and Conclusions. Below the abstract should provide 3 to 10 key words.

Introduction

State the purpose of the article and summarize the rationale for the study or observation.

Methods

Describe the selection of the observational or experimental subjects (patients or laboratory animals, including age, sex, and other important characteristics of the subjects. Identify the methods, apparatus (give the manufacturer and model in parentheses), and procedures in sufficient detail. Give references to established methods, including statistical methods, and brief descriptions for methods that have been published but are not well known; describe new or substantial modifications to established methods, and evaluate their limitations. Identify precisely all drugs and chemicals used, including dose, and route(s) of administration.

Reports of randomised clinical trials should present information on all major study elements, including the primary and secondary outcomes (methods of randomisation, concealment of allocation to treatment groups), and the method of analysis. Use the CONSORT statement (Moher D, Schulz KF, Altman DG: The CONSORT Statement: Revised Recommendations for Reporting of Parallel-Group Randomized Trials. *Ann Intern Med.* 2001;134:657-662, also available at <http://www.consort-statement.org/>).

When reporting studies on human, indicate whether the procedures followed were in accordance with the ethical standards of the committee on human experimentation (institutional or regional) and with the Helsinki Declaration of 1975, as amended (see http://www.wma.net/e/policy/17-c_e.html). Do not use patients' names, initials, or hospital numbers, especially in illustrations. When reporting studies on animals, indicate whether the institution's or a national research council's guide for, or any national or international standard, for the care and use of laboratory animals was followed.

When possible, quantify findings and present them with appropriate indicators of measurement error or uncertainty (e.g. confidence intervals). Report losses to observation (such as dropouts from a clinical trial). Put a general description of results in the Results section, specify the statistical methods used to analyse them. Avoid technical terms in statistics, such as 'random' (which implies a randomising device), 'normal', 'significant', 'correlation', 'coefficient', 'statistical terms, abbreviations, and most symbols. Use upper italics ($P = 0.046$).

Results

Present the results in logical sequence in the text, tables, and illustrations. Do not repeat in the text all the data. Do not emphasise or summarise only important observations.

Discussion

Include Summary of key findings (primary outcome measures, secondary outcome measures, results as the Strengths and limitations of the study (study question, study design, data collection, analysis and interpretation) implications in the context of the totality of evidence (is there a systematic review to refer to, if not, could one now?, what this study adds to the available evidence, effects on patient care and health policy, possible mechanism by this study; and Future research directions (for this particular research collaboration, underlying mechanisms) repeat in detail data or other material given in the Introduction or the Results section.

In particular, contributors should avoid making statements on economic benefits and costs unless their main aim is cost-benefit and analyses. Avoid claiming priority and alluding to work that has not been completed. State new hypotheses and label them as such.

Acknowledgments

As an appendix to the text, one or more statements should specify 1) contributions that need acknowledging such as general support by a departmental chair; 2) acknowledgments of technical help; and 3) acknowledgments of financial support, which should specify the nature of the support. This should be the last page of the manuscript.

References

References should be numbered consecutively in the order in which they are first mentioned in the text (not in the order in which they appear in text, tables, and legends) by Arabic numerals in superscript. References cited only in tables or legends should be numbered in accordance with the sequence established by the first identification in the text of the particular item. The examples below, which are based on the formats used by the NLM in Index Medicus. The titles of journals should be abbreviated according to the style used in Index Medicus. Use complete name of the journal for non-indexed journals. Avoid abbreviations in references. Information from manuscripts submitted but not accepted should be cited in the text as "unpublished" and not "in preparation" without permission from the source. Contributors should obtain written permission and confirmation of accuracy from the author(s) before publication. The commonly cited types of references are shown here, for other types of references such as books, book chapters, etc. please refer <http://www.icmje.org>.

1. Standard journal article: Jain VK, Behari S. Management of congenital atlanto-axial dislocation: some ICMJE guidelines. *Journal of Clinical Medicine* 2002;50: 386-97.
List the first six contributors followed by et al.
2. Personal author(s): Ringsven MK, Bond D. Gerontology and leadership skills for nurses. 2nd ed. Albarquerque: Sage; 1996.
3. Chapter in a book: Phillips SJ, Whisnant JP. Hypertension and stroke. In: Laragh JH, Brenner BM, editors. *Hypertension: pathophysiology, diagnosis, and management*. 2nd ed. New York: Raven Press; 1995. pp. 465-78.

Download a [PowerPoint presentation](#) on common reference styles and using the reference checking facility on the website.

Tables

- Tables should be self-explanatory and should not duplicate textual material.
- Tables with more than 10 columns and 25 rows are not acceptable.
- Number tables, in Arabic numerals, consecutively in the order of their first citation in the text and supply a brief description of the table.
- Place explanatory matter in footnotes, not in the heading.

- Explain in footnotes all non-standard abbreviations used in table.
- Obtain permission for all fully borrowed, adapted, and modified tables and provide a credit line in the footnote.
- For footnotes use the following symbols, in this sequence: *, †, ‡, §, ||, ¶, **, ††, ‡‡

Illustrations (Figures)

- Submit three sets of sharp, glossy, un-mounted, colour photographic prints, with height of 4 inches and width of 6 inches.
- Figures should be numbered consecutively according to the order in which they have been first cited in the text.
- Each figure should have a label pasted on its back indicating the number of the figure, the running title, and the page number of the figure. Do not write the contributor/s' name/s. Do not write on the back of figures, or mark them with a pen or pencil.
- Symbols, arrows, or letters used in photomicrographs should contrast with the background and should be done by tissue overlay and not by pen/marker/pencil.
- If a figure has been published, acknowledge the original source and submit written permission from the publisher of the material. A credit line should appear in the legend for such figures.

Legends for Illustrations

Type or print out legends (maximum 40 words, excluding the credit line) for illustrations using double spacing corresponding to the illustrations. When symbols, arrows or letters are used to identify parts of the illustration, identify them clearly in the legend. Explain the internal scale and identify the method of staining in photomicrographs.

Protection of Patients' Rights to Privacy

Identifying information should not be published in written descriptions, photographs, CT scans, etc., and pediatric information essential for scientific purposes and the patient (or parent or guardian) gives written informed consent. Informed consent requires that the patient be shown the manuscript to be published. When informed consent has been obtained, the original article and copy of the consent should be attached with the covering letter.

Electronic Version

- The manuscript must be accompanied by a 3.5 inch (1.44 MB) floppy containing the manuscript.
- Do not use 'oh' (O) for 'zero' (0), 'el' (l) for one (1). Do not use space bar for indentation. Do not type headings in CAPITALS. Do not break words at the end of lines. Do not use an extra hard return/enter between paragraphs, or indent, or extra spaces before beginning of a paragraph. Do not use software's facility of automatic reformatting, footers, etc.
- Use a hyphen only to hyphenate compound words. Use only one letter space at the end of sentence. Use one space at the end of paragraphs and display lines (e.g. titles, headings and subheadings). Incorporate notes or footnotes in parentheses, rather than their usual place at the foot of the page.
- Provide the tables and charts at the appropriate place in the text and not at the end of the manuscript.
- Care should be taken to prevent damage during transit.

Proofs and Reprints

Journal does not provide any free printed reprints. Reprints can be purchased at the time of submitting the proof by e-mail 3-4 weeks prior to scheduled publication.

Copyrights

The whole of the literary matter in the Journal of Pediatric Neurosciences is copyright and cannot be reproduced without the permission of the Editor.

Check list

To be tick marked and one copy attached with the manuscript

Covering letter

- Signed by all contributors
- Previous publication / presentations mentioned
- Source of funding mentioned
- Conflicts of interest disclosed

Authors

- Middle name initials provided
- Author for correspondence, with e-mail address provided
- Number of contributors restricted as per the instructions
- Identity not revealed in paper except title page (e.g. name of the institute in material and methods, citation names on figure labels, name of institute in photographs, etc.)

Presentation and format

- Double spacing
- Margins 2.5 cm from all four sides
- Title page contains all the desired information (vide supra)
- Running title provided (not more than 50 characters)
- Abstract page contains the full title of the manuscript
- Abstract provided (not more than 150 words for case reports and 250 words for original articles)
- Structured abstract provided for an original article
- Key words provided (three or more)
- Introduction of 75-100 words
- Headings in title case (not ALL CAPITALS, not underlined)
- References cited in superscript in the text without brackets
- References according to the journal's instructions.

Language and grammar

- Uniformly American English
- Abbreviations spelt out in full for the first time
- Numerals from 1 to 10 spelt out
- Numerals at the beginning of the sentence spelt out

Tables and figures

- Number within specified limits.
- No repetition of data in tables/graphs and in text
- Actual numbers from which graphs drawn, provided
- Figures necessary and of good quality (colour)
- Table and figure numbers in Arabic letters (not Roman)
- Labels pasted on back of the photographs (no names written)
- Figure legends provided (not more than 40 words)
- Patients' privacy maintained (if not, written permission enclosed)

- Credit note for borrowed figures/tables provided

Manuscript provided on a floppy (with single spacing)

 **Contributors' form**

(to be modified as applicable and one signed copy attached with the manuscript)

Manuscript Title: _____

Manuscript number: _____

I/we certify that I/we have participated sufficiently in the intellectual content, conception and design of this work, the interpretation of the data (when applicable), as well as the writing of the manuscript, to take public responsibility and have my/our name listed as a contributor. I/we believe the manuscript represents valid work. Neither this manuscript nor any substantially similar content under my/our authorship has been published or is being considered for publication elsewhere as described in the covering letter. I/we certify that all the data collected during the study is presented in this manuscript and no study has been or will be published separately. I/we attest that, if requested by the editors, I/we will provide the data and cooperate fully in obtaining and providing the data/information on which the manuscript is based, for examination and publication. I/we also certify that we have taken all necessary permissions from our institution and/or department for publishing the present work.

Financial interests, direct or indirect, that exist or may be perceived to exist for individual contributors in connection with this paper have been disclosed in the cover letter. Sources of outside support of the project are named in the cover letter.

I/We hereby transfer(s), assign(s), or otherwise convey(s) all copyright ownership, including any and all rights in and to the Journal of Pediatric Neurosciences, in the event that such work is published by the Journal of Pediatric Neurosciences shall own the work, including 1) copyright; 2) the right to grant permission to reproduce the work with or without fee; 3) the right to produce preprints or reprints and translate into languages other than English; and 4) the right to republish the work in a collection of articles in any other mechanical or electronic format.

We give the rights to the corresponding author to make necessary changes as per the request of the journal. The corresponding author's correspondence on our behalf and he/she will act as the guarantor for the manuscript on our behalf. All persons who have made contributions to the work reported in the manuscript, but who are not contributors, are named in the Acknowledgments. If their written permission to be named. If I/we do not include an Acknowledgment that means I/we have not received permission from non-contributors and no contributor has been omitted.
